

DRILL: Remote Assessment and Consultation – Manned Vessel

AA) VESSEL NAME:		IMO NO.		DATE	
BB) Applicability:	Manned tank vessels and NTVs carrying oils as cargo or fuel. Note: NTVs with a capacity of less than 250 barrels of oil are not required to plan SMFF resources for fire scenarios, and their exercises should be designed accordingly.				
CC) Frequency:	Triennially per plan holder while operating in U.S. waters, including the EEZ; otherwise, upon entry into U.S. waters. The remote assessment and consultation exercise is not required for vessels operating outside U.S. waters.				
DD) Initiating Authority:	Vessel owner or operator, vessel master, or designee, according to the procedure established in the VRP.				
EE) Participating Elements:	VRP-designated vessel and shore-side personnel for activation of and provision of remote assessment and consultation services.				
FF) Scope:	Contact DONJON-SMIT via our 24/7 emergency telephone number: +1 703-299-0081 Electronic messaging may be used for the initial contact only if communication by voice is not possible. You may email DONJON-SMIT at drills@donjon-smit.com				
GG) Objectives:	<p>A. Following VRP notification/activation procedures, the information communicated from the vessel to the remote assessor identifies a general scenario type from the VRP's shipboard emergency procedures section (e.g., collision, excessive list, fire). <u>Use the General Casualty Information Sheet provided by DONJON-SMIT.</u> Confirm that remote assessor has the VRP shipboard emergency procedures section of the VRP.</p> <p>B. Remote assessment and consultation for a fire scenario must be exercised triennially, except for NTVs with oil capacity less than 250 barrels, which are exempt from planning for fire response. The remote assessor listed in the VRP (identified by contract and funding agreement) advises the vessel what on-scene situational information would facilitate his or her preliminary assessment of the vessel's status, given the type of scenario. <u>Use the Fire/Explosion Casualty Information Sheet provided.</u></p> <p>C. Vessel and assessor establish a communication process that would support completion of the vessel's stability and structural integrity assessment through use of a salvage software program.</p>				
HH) Certification:	Self-certification.	II) Verification:	USCG COTP/FOSC.	JJ) Records Retention:	Three years.
KK) Records Location:	Onboard the vessel. Records must also be maintained at the U.S. location of the QI, the vessel owner or operator, the IMT, or the SMFF provider, as designated in the VRP.				
LL) Evaluation:	Self-evaluation. Owner or operator should conduct a review to determine if objectives have been met.				
MM) Credit:	NOTE: These exercises may be conducted concurrently with the quarterly QI notification exercises or shipboard emergency procedures exercise. Plan holder may claim credit for this exercise when conducted in conjunction with other exercises, as long as all objectives are met, the exercise is evaluated, and a proper record is generated. Credit may be claimed for an actual response when these objectives are met, the response is evaluated, and a proper record is generated.				
NN) CONFIRMATION OF EXERCISE CREDIT
